

Instructions for Z-1 Battery Replacement Labels

1. Carefully cut out the label. Practice steps 2 through 4 several times before attempting to glue the label.
2. Note the right side has about a plain margin of 5/8." Orient the label so that the battery contact holes will be at the top of the label.

3. Align the right edge of the label along the side of the Z-1 battery and wrap the left side around the battery so that it overlaps the right side. Make sure the label edges are correctly aligned. The label should fit snugly, but not so tight that it can't slide off the battery body after it has been glued.
4. While holding the label in place, gently expose left edge of the label enough to run a thin bead of hot glue down the back side of the label about 1/8" inch from the edge and press against the right side of the label. Run your finger over the joint to create a tight, flush seam where the edges meet. The hot glue will dry quickly.

That's it!
